Heldmark — architecture

One new quiz, project, or note updates one learner. About 10 minutes. The teacher decides.

What the profile may say

The source, the date, and the result.

Example: word-problem scores 40, 38, 41 on these three quizzes, at these schools.

One score, or a missing source: no pattern.

No track. No label. No rank. No share.

Audit log

Every tool call stores input, output, timestamp, and learner id.

The profile is shown only to the named teacher.

Where it stops

The teacher may raise a pattern with the learner and guardian, in person.

The agent does not message them and does not suggest a path.

Own server: `heldmark-records`. Borrowed: official Filesystem MCP. Store: SQLite. Orchestration: LangGraph.
